Job Title: Senior UI developer

Profile

Passionate front-end web developer with 8 years of experience, always eager to stay up-to-date with the latest technology. Working on challenging projects is what piques my interest. There is always room for learning, and I am excited to leverage my experience while acquiring new skills within the organization.

Key skills

HTML5, CSS3, JavaScript (ES6+), React.js, Redux & Redux toolkit

Work experience

Application Developer, Experienced Front-end

IBM, India | May 2022 – Present

Responsible for developing applications using React, I have worked on the following projects:

IBM Project Assignment History

Cencora | April 2024 – Present

Role: Senior UI Developer
Cencora is a leading pharmaceutical solutions organization centered on improving the lives of people everywhere.

Contribution
Responsible for developing UI components, Working on adding new features to existing application.

IBM Internal ALCM PEGiT, India | Dec 2023 - Mar 2024

Project 1 - ALCM PEGiT
Role: Technical Lead

ALCM is a startup located in South Africa, which mainly focuses on Home Improvement systems. Here we connect homeowners to service providers like electricians and plumbers so that they can get their requirements fulfilled. This project we have developed from scratch, and this project was an MVP.

Contribution:
a) Taking ownership of the code repository, including peer code review, merging, and deploying app versions. Deploying to UAT and resolving UAT issues.
b) Guiding the team to use reusable components wherever necessary.
c) Collaborating with designers and backend developers to implement user interfaces that meet both aesthetic and functional requirements.
d) Implementing best practices for accessibility and web performance optimization.
e) Participating in code reviews and providing constructive feedback to peers to ensure code quality and consistency.
f) Actively participating in team discussions and contributing ideas for improving development processes.

Challenges:
Faced challenges in rendering PDF content in the application across different form factors such as mobile, tablet, and various browsers. Successfully overcame these hurdles.

Lowe's India Pvt Ltd, India | Jun 2022 - Nov 2023

Domain: Supply Chain & Replenishment
Role: Senior UI Developer

Worked on the following two projects:
Project 2 - Demand Management: A comprehensive order management tool with options to Manage, Update, and view History for orders. Exception Management: The application is highly dynamic, aiding in identifying exceptions regarding order details mismatches, tracking, and following up on critical exceptions, which assists store users in quickly understanding the problem with the order and taking necessary action.

Contribution: Demand Management: I worked on creating a dynamic tabs feature inside the application, similar to the browser's new tab feature. I was also responsible for uploading the orders list file. For the uploading feature, I proactively introduced an extra component, which adds more value to the application—a file upload tracker (which was not present in the UX).

Challenges: Multiple instances of the tab were conflicting with data across tabs, leading to data mismatch. I was able to resolve this by maintaining a separate data pattern inside Redux to avoid any conflicting data across tabs within the application.

Project 3 - Exception Management: I was responsible for developing the core part of the application, which handles data validation and corrections. This application focused on displaying exception records in the dashboard grid, allowing store users to correct those exception records in the application.

Challenges: There were quite a few challenges regarding multiple-row data correction in the case of a large number of data with pagination in place inside the grid. I was able to successfully tackle this challenge and come up with a solution.

Software Engineer ||
Cerner Healthcare Solutions Pvt Ltd, India | Jun 2016 - May 2022

Worked on developing the Patient Home Medications view project, which involved using a majority of UI controls
& complex logic for handling large patient data. Worked on different components related to Patient charts like
Outstanding Orders, Orders Scratchpad, Order Details, and Orders Worklist. I was responsible for developing
UI Controls, writing unit tests and code reviews for all the above projects.
